Some people make videos and post them to YouTube and Facebook, but Bandicam is great for making high-quality videos on your PC, and it's perfect for screen recordings. One of the most useful features in Bandicam is its "Record Directly From A Window" function which means that you can record anything that appears in a single window without needing any editing software like Adobe Premier or Sony Vegas Pro. That means if you want to record something like your PC desktop with all its windows open, then this feature will let you do it easily without having to close down some of the windows first. Bandicam has many other really useful functions too... Also, Bandicam is great for making presentations because you can easily show people what's on your screen while you're explaining something to them. It's also great for recording your game-play while you're playing online games like League of Legends or World of Warcraft. It can even record Skype chats and calls which you need to be sure are completely private because they will not be saved on your computer; they go directly to Bandicam's servers. Bandicam has other features that make it the perfect choice for making gameplay videos like the ability to adjust the video resolution and frame rate, and it also has support for microphones, webcams, and overlays. Webcam recording is great for games like League of Legends and World of Warcraft, where it's highly likely that you need to capture a video in video-game action. And the Bandicam interface lets you load up your webcam and microphone in minutes, so you don't have to worry about setting up separate recording software. And if you want to add a little more eye candy and style to your videos, then you can add in different overlays such as different types of text or borders that you can use for effects. Bandicam is fully compatible with all modern operating systems including Windows 8, 8. 1, 10, Vista, XP, 2000 and ME. Bandicam 4.5 is available to download for free at their website. Bandicam has full support for Windows Vista/7/8/10 32-bit and 64 bit, Windows Server 2008/2008 R2(Server Core), Windows Server 2012 R2(Server Core) and Windows Server 2016 (Server Core). It does not support any other operating systems such as Mac OS X or Linux.

Premium Version of Bandicam Pro is available to download for free.

Bandicam 8.0 Update 1 to 8. 0.1 released on 7 December 2017 Bandicam 7.3 Update 1 to 8.0 released on 4 August 2016 Bandicam 6.2 Update 1 to 7.3 released on 21 December 2015
